Abstract (en)

[origin: WO9008829A1] A recombinant plant gene for regulation of gene expression has a repressor protein gene of bacterial origin associated with an operator which is recognised by the bacterial repressor protein and which controls expression of a foreign structural gene.

Abstract (fr)

Un gène végétal de recombinaison permettant la régulation de l'expression de gènes, comporte un gène de protéine de répression d'origine bactérienne associé à un opérateur reconnu par la protéine de répression bactérienne, et régulant l'expression d'un gène structurel étranger.
