Abstract (en)

[origin: EP0456004A2] The invention relates to a side element of an internal lining for dormer windows for installation in sloping roofs, whereby the side element is made up of at least one standardised main section with two essentially parallel edges and at least one supplementary section for connection in the lower area with a common cross joint, whereby the cross joint is arranged outside the line of the inside edge of the inclined wall, preferably parallel to the window surface. <IMAGE>
