Abstract (en)

Disclosed are a calcium carbonate pigment for heat-sensitive recording paper, the pigment having a BET specific surface area of about 17 to about 55 m<sup>2</sup>/g, an oil absorption of about 90 to about 220 ml/100 g as determined by the Ogura method and a surface acidity of solid substantially represented by the following equation (Z): <MATH> wherein x is a BET specific surface area (m<sup>2</sup>/g) and y is a surface acidity of solid (μmol/g); a process for preparing the pigment; coating compositions comprising said pigment each for forming an intermediate layer of heat-sensitive recording layer, and for a heat-sensitive recording layer thereof; and heat-sensitive recording papers obtained by application of the coating compositions.
