Abstract (en)

[origin: EP0456879A1] Organohalides are dehalogenated by bringing an organohalide or a mixture of two or more organohalides into contact with an alkali hydroxide in an alcoholic solution and in the presence of a catalytically effective amount of a heterogeneous transfer hydrogenolysis catalyst. The process can be carried out at relatively low temperatures (50 DEG - 150 DEG C) and at low pressures. <IMAGE>
