Abstract (en)

[origin: EP0456885A1] The training pant (10) is generally made in a 2-step process which provides a substantially flat 2-dimensional backsheet (30) carrying waist elastics (38, 39), a fluid barrier (41) and an absorbent core (43). The second section provides a generally flat, 2-dimensional topsheet (45), which carries leg elastics (51, 52) and frontal elastics (53, 54) and which is combined with and which overlies the aforementioned backsheet (30). Subsequent half-folding of the assembled webs (30, 45) produces a U-shaped member (64) which, when cut, assembled and severed, provides discrete individual training pants (10), each having a unique frontal elastic to provide a better fit of the garment between a front waist elastic (39) and front terminal edges of the leg elastic (51, 52). The product (10) is further characterized in that both the backsheet (30) and the topsheet (45) may be of breathable pervious material, with the only impervious portion being a coating (41) between the absorbent core (43) and the backsheet (30). <IMAGE>
