Abstract (en)
[origin: EP0456898A2] A laboratory centrifuge of the fixed angle type is disclosed which is composed of an upper and a lower plastic injection moulded part. The upper injection moulded part has a cover which is continuous with an external side wall and the lower plastic injection moulded part has a floor surface which extends towards the hub part, the two plastic injection moulded parts being held centered with respect to one another both in the region of the hub part and in the region of the side wall. All the radial and axial webs and planar parts as well as those running in the circumferential direction are gripped with their surface parallel to the planes in which the axis extends or perpendicularly to these planes. At least edge parts of the floor surface at the radially outer edge are upwardly directed and form a circumferential edge which engages behind edge parts of the upper plastic injection moulded part.
