Abstract (en)
[origin: EP0457012A1] The pot (20) of plastic, which is known per se and receives the water, is inserted into a steel pot (30) cast in the concrete. The drainpipe (34) made of plastic is connected to a connection piece (33) of the steel pot. This prevents flames advancing from the pipe (34) to the plastic pot in the event of a fire. In addition, there is the possibility of adjusting the plastic pot in the steel pot in terms of height for the purpose of adaptation to the surface. In addition, the transmission of footstep sound from the floor to the concrete is prevented. <IMAGE>
