Abstract (en)  
[origin: CA2041195A1] The invention refers to a carrying bag of thermoplastic material, which comprises side walls to the inwardly folded top edge portions of which handle loops made of a similarly flexible material are bonded. In order to obtain a multifunctional carrying bag which can be easily and economically manufactured and is simply to be recycled, the one edge portion (16) of a side wall (12) protrudes over the edge portion (18) of the other side wall (14), said protruding edge portion (16) having a slit-like cut (22) in the region of the handle loops (20).
