Abstract (en)

[origin: EP0457107A1] The invention relates to a closure cap (V) for infusion or transfusion bottles, with a stopper (6) which is adapted to the neck (3) of the bottle and which is covered by a cap (8) anchoring by means of engaging under the neck (3) of the bottle, and, in order to achieve a solution which is particularly advantageous from the design point of view, the invention proposes that the engagement of the cap (8) under the neck (3) be achieved by means of individual resilient tongues (10) which are secured in the engagement position by being supported by means of a sliding ring (15) which surrounds them, the supporting means at the same time serving to secure the sliding ring (15) in its supporting position.
