Abstract (en)

[origin: EP0457247A1] In a transport trolley for transporting an operating table (20) comprising a supporting column (18) and a table surface (26) which can be removed therefrom, having a running gear (10) and two supporting bars (24) intended to bear the table surface (26), which are arranged at a distance from and parallel to each other on the running gear (10) in such a manner that they can be brought into a position of engagement with the table surface (26) on both sides of the supporting column (18), at least one bearing element (28, 30), on which the supporting column (18) of the operating table rests, is arranged on the transport trolley on each side of the intervening space between the supporting bars (24), in such a manner that it is adjustable, in each case, between a bearing position, in which it projects into the intervening space between the supporting bars (24) in order to engage under a part (32) fixed to the supporting column, and a position of release. Each pair of bearing elements (28, 30), situated on the two sides of the intervening space, are connected to each other in such a manner that, when one bearing element (28, 30) is adjusted, the associated other bearing element (28, 30) is moved into the same position. <IMAGE>
