Abstract (en)

[origin: EP0457254A2] A device is described for holding adjacent to one another a plurality of identical and/or different electrical, especially telecommunications, components, such as screw terminal strips 27, plug connector halves 30, printed-circuit boards or the like, for adaptation into or to appliances, apparatuses or the like. This device is characterised by a polygonal hollow block 2, which can be closed at least on one side by means of a removable cover 8 and has at least three side walls 4 to 7, projecting from a base 3, on whose outsides the components 27 and 30 are seated or can be mounted, while the wiring or the like which produces the electrical connections between the components 27 and 30 is held inside the polygonal hollow block 2. <IMAGE>
