Abstract (en)

[origin: WO9009178A1] A series of N<6>-substituted adenines are disclosed to be antagonists of A2-adenosine receptor-mediated stimulation of adenylate cyclase in A2-adenosine receptors and antagonists of A1-adenosine receptor-mediated inhibition of adenylate cyclase. These compounds are useful in reversal of adenosine-mediated lipolysis, reversal of adenosine-mediated deleterious cardiovascular effects (conduction defects, hypotension), reversal of adenosine-mediated vascular actions in kidney, bronchodilation, antiarrhythmic action, reversal of adeno-mediated relaxation of smooth muscle, anti-narcoleptic action, CNS stimulation, and blockade of adenosine mediated inhibition of neurotransmitter release.
