Abstract (en)
[origin: EP0457948A1] The invention relates to a microwave apparatus, having a multi-mode chamber for heating and sintering ceramic mouldings (16). In order to achieve a largely homogeneous field distribution, it is proposed to set at least one wall (3) of the chamber (1) in motion, preferably a linear motion, during the sintering process, with the aid of a drive (4,5,6). <IMAGE>
