Abstract (en)
[origin: EP0458112A1] The subject of the invention is a device for splicing a material web close to its web end to the web start of a second web and comprises the features contained in the precharacterising clause of patent claim 1. The core of the invention is that the holding and pressure heads (5, 6) are pivotable about axes (12) which are arranged at a distance from the deflection rollers (13, 14) and outside the intermediate space (27) of the deflection rollers. <IMAGE>
