Abstract (en)
[origin: EP0458237A1] It is characterised in that it comprises, on the one hand, a central conductor (1) and, on the other hand, a conducting ferrule (2), both being in a substantially cylindrical conductive body (3), with the ferrule, on the one hand, directly and solidly connected to the body in a rear section (3B) of the latter, and on the other hand, making an annular reception space with clamping of the outer conductor of a coaxial cable, between this ferrule and the body, and with the central conductor (1) held captive in an insulating support ring (4) which is itself solidly connected to the body in a front section (3A) of the latter. <IMAGE>
