Abstract (en)

[origin: EP0458399A1] The present invention relates to a vehicle handle unit consisting of two parts, an inner one and an outer one (i.e. the handle) which are being assembled to a vehicle door in correspondence to a large radius indentation with interposition of single-use spacer inserts mounted below levers hinged in the inner part so that any contact between the handle and door is prevented when the handle is to be mounted. <IMAGE>
