Abstract (en)

The invention relates to a box comprising a door (11), means (42) forming a catch which are mounted on the box or the door (11), means (23) forming a bolt which are mounted on the other of the said elements for interacting with the means forming a catch, the means forming a catch being movable in translation and the means forming a bolt being stationary or vice-versa; means for guiding the said movable means (41, 42) in translation, comprising an edge including a flange, the movable means being held pressed against this flange, and drive means (43, 61) for driving the said movable means (42). According to the invention, the said flange has a flap (31) extending from one edge of the flange parallel to the latter so as to form a slide, the said movable means being disposed between the flange and the flap (31). <IMAGE>
