Abstract (en)  
[origin: EP0459311A2] A plastic foil bag, in particular a so-called security bag, which is used for example for the conveyance of currency, valuables, documents or the like, exhibits a fold-down closure flap with a tamper-indication closure. In order to make tampering with the foil bag or its contents unmistakably evident, the tamper-indication closure exhibits a metal layer of a few  $\mu$  thickness connected to the closure flap and an adhesive layer applied to it, which is provided with a protective layer covering it before use, after whose removal and after the closure flap is folded down the metal layer can be connected to the foil bag via the adhesive layer.
