Abstract (en)

[origin: EP0459031A1] The invention proposes a pressure control valve (23) for crank case ventilation on an internal combustion engine, this pressure control valve (23) being combined with a filler opening (19, 20) for engine oil and an oil dipstick (21, 22). This combination is distinguished by the fact that it is particularly space-saving and that all components relating to the supply and monitoring of oil in an internal combustion engine are connected centrally. <??>This combination is furthermore distinguished by the fact that only a single connection is required on the engine block, through which the oil to be introduced or the oil returning from the pressure control valve is fed to the sump and which furthermore accommodates the dipstick. <IMAGE>
