Abstract (en)
[origin: EP0459182A2] Containers for lyophilized pharmaceutical products to be administrated in drops, consist of two bottles (1, 8). The first one (1), that initially contains the lyophilized product (2), is made of rigid material and is provided with a hermetically sealed cap (3) that can be partially ripped open and with a rubber stopper (7) interposed between the cap (3) and its own open edge. The second bottle (8), that is designed for containing initially the solvent (10) is made of compressible material and is provided with a spout (9). The first bottle (1) has a hole (6) in the stopper (7) designed for receiving the spout (9). <IMAGE>
