Abstract (en)

[origin: EP0459899A1] The invention relates to a system for assembling self-supporting insulating panels (44) in the under-roofing insulation of buildings, comprising a section (1, 16, 27, 42) having a central web (4, 17, 47) providing the rigidity and determining the height of the section and two parallel bases, the lower base (10, 21, 35, 50) enabling the profile to be fixed to framework elements, the upper base (7, 20, 35, 45) enabling the roofing (55) to be fixed to the section. The system is characterised by two flanges (11, 12, 22, 23, 33, 34, 52, 53) extending on each side of the web of the section, and the upper ends of which enable the insulating panels to be supported at the desired level under the roofing. <IMAGE>
