Abstract (en)

The invention concerns a cutting device for a web winder. The cutting device (10) comprises a frame construction (11) and a cutting blade (16), by means of which cutting blade (16) the web in the reel (20) formed on support of the carrier drums (18,19) can be cut off before new winding is started. The cutting device (10) comprises an actuator (17) and power transfer members (13,14), which are operationally connected with the cutting blade (16) of the cutting device (10) so that the movement of the actuator (17) is fitted to be transferred by the intermediate of said power transfer members (13,14) to the cutting blade (16) so that the cutting blade (16) is fitted to move along a curved path of movement so that the position of the cutting blade (16) in the lower position is substantially more distant from the carrier drum (18) than in the upper position. <IMAGE>
