Abstract (en)

[origin: EP0460549A2] The invention relates to an apparatus for winding paper tapes, such as those used in particular for printed paper tapes in tape printers for documentation purposes, consisting of a driven winding core with feed and deflection rollers as well as a band tensioning arm, the apparatus having a retractable, forked winding core with a lateral retraction limiter and the winding core preferably having four winding bars each offset by 90 DEG on the winding circle in such a way that the paper coil received can be removed freely when the winding core has been retracted.
