Abstract (en)
[origin: EP0461010A1] The subject of the invention is a miniaturised package capable of storing and transporting components of a product to be prepared, and then of mixing them for dispensing the latter. <??>Essentially constituted from a casing (1) housing, side by side, two containers (7a, 7b) whose receptacles are closed by axial jet dispensers fitted in a parallel and sealed manner under a common head (2) which connects them to the same dispensing nozzle (3), the addition of a compensating member (14) balancing the travels and penetrating forces on the two dispensers (8a, 8b), this package allows, in particular, the presentation of medicines for extemporaneous preparation in a convenient form. <IMAGE>
