Abstract (en)

[origin: EP0461062A1] Process for manufacturing a fabric-supporting assembly (12) of a roller blind and assembly obtained from its implementation, of the type comprising a support arm (1) designed as one or two parts, which arm is connected to the construction by support pieces (13) provided with a part (16), enabling the said support arm to be fixed and to be angularly adjusted, a fabric-roller tube (2), two articulated arms (6), a load bar (11) and various means for connecting the said sub assemblies to the support arm, characterised in that it consists in a) cutting a tube to a length corresponding substantially to the length of the support arm (1) added to the lengths of the connection means (3): b) flattening the ends of the tube and forming, on the said flattened parts, openings (4) and (8); c) bending over the ends of the tube, each comprising the flattened part, the operations b) and c) being reversable. <IMAGE>
