Abstract (en)
[origin: EP0461292A1] A writing organ (10) having capillary chambers (36) is described, and can be in particular a writing organ of a so-called fineliner. The writing organ (10) has a holder (12) which is designed as a tubular sleeve (14). The sleeve (14) has a front end section (16) with an interior cross-section adapted to the writing organ (10). A rearward sleeve section (18) adjoins the front end section (16) of the sleeve (14) and has an interior cross-section which is greater than the cross-section of the writing organ (10), so that an intervening space (20) is present between the sleeve section (18) and the writing organ (10). A spring element (22) is arranged in the intervening space (20) and is secured by its front end section (24) to the writing organ (10) and by its rear end section (28) to the rearward sleeve section (18). In this manner, a resilient design of the writing organ (10) in relation to the sleeve (14) is achieved. <IMAGE>
