Abstract (en)
[origin: EP0461370A2] A sliding-bar covering for overlapping a gap between mutually opposite ends of two sliding bars, in which one sliding bar has in the region of its end a longitudinal slot, into which a T-shaped extension of a cover plate engages, the T-shaped extension engaging under the side edges of the longitudinal slot and being guided longitudinally displaceably in this, is characterised in that the T-shaped extension of the cover plate comes to rest with its projecting circumferential portions in the longitudinal slot within the sliding-bar thickness and engages under side edges of the longitudinal slot. <IMAGE>
