Abstract (en)  
Semi-fixed roof structure for a vehicle transport wagon in which the roof (2) may at least partly be lifted upwards in order to obtain space to pass and arrange ventilation during loading and unloading of the wagon. The uniform roof (2) is at least at one of its edges (12a) in the longitudinal direction of the wagon pivoted to the upper edge (11a) of the wagon's first wall structure to be turned around a horizontal axis line (13) and at its opposite other edge (12b) through joints (14) connected with the vertically displaced members (3a, 3b) by the help of an actuator in order to lift said edge (12b) of the roof and thus to incline the roof around said pivoting.
