Abstract (en)

[origin: EP0461453A1] The invention relates to a method of bonding the structural components of a ski, consisting in assembling at least a first element (1) and a second element (2) by the action of a layer of adhesive bonding material (5), of resin or of foam, interposing at least between the layer of adhesive bonding material (5) and the junction surface of the first component (1) a thermoplastic film (6), suitable for bonding, composed of a mixture of one or more thermoplastic elastomer(s) based on polyamide and of an olefin copolymer consisting of at least two different olefin monomers. The mixture is such that the thermoplastic elastomer(s) represents (represent) at least 50 % and preferably at least 60 % of the total weight of the mixture. <IMAGE>
