Abstract (en)

The method for attachment of mirrors according to the invention is characterised by the following stages, all carried out from the inside of the cabin, both on mounting and demounting: - application of the mirror (5) on a vertical rebate (6) of a first wall (7) of the chassis (3) of the cabin (1); - attachment of a lateral cover strip (11) overlapping a vertical edge (7a) of the first wall (7) of the chassis (3) and a vertical edge of the mirror (5); - positioning of at least one magnetic element (15) between the cover strip (11) and a second wall (16) of the chassis (3) perpendicular to the first (7), the magnetic elements (15) being situated on the same plane as the cover strip (11); - positioning, by contact on the magnetic element (15), of a screen (17) arranged in the angle of the cabin as covering for the means of attachment. Application to elevator cabins.
