Abstract (en)

Dobby for looms, of the type comprising a series of actuating elements (1) which are put in dependence on the weaving program incorporated in the reading-in device and which are coupled to pull levers (3) connected to the heald frames (9) by means of drawing systems (8), characterised in that between the pull lever (3) and the drawing system (8) of at least some of the actuating elements (1) is interposed an arm (5) associated with actuating means which impart to it a periodic oscillating movement in synchronism with the control cycle of the actuating elements (1), said arm being carried pivotably by the abovementioned lever (3) so as to continue its oscillating movement in either one of the two working positions of the latter. <IMAGE>
