Abstract (en)
[origin: WO9007321A2] Proteins are identified as homing receptors for Peyer's patches and lymph nodes, where the proteins may be used for inhibiting homing of lymphocytes or providing for homing of drugs or other compositions for in vivo diagnosis or therapy. In addition, nucleic acid compositions are provided which may be used for expression of the proteins or fragments thereof or for transforming cells to provide for enhanced homing capability or for inhibiting or modulating such homing.
