Abstract (en)
[origin: EP0463315A2] A hairdryer (10) is disclosed, which has a double-walled housing (12), through which a subsidiary air flow can be conducted. The hairdryer (10) has a central, load-bearing component (46), to which all the other parts of the housing of the hairdryer can be attached directly or indirectly and it is provided with a handle (30) which can be rotated by single angular stages about an axis of rotation (100) which is approximately vertical to a longitudinal axis (106) of the housing. <IMAGE>
