Abstract (en)

[origin: EP0463898A1] Device for manually controlling a thermal relay associated with a contactor and housed with the latter inside a box provided with stop and reset push-buttons. <??>Levers (30, 40) are mounted rotatably in a support (50) attached to the front of the casing (21) of the thermal relay (20). Each push-button can be applied to a respective lever in order that the latter be applied to a stop button (26S) or a reset button (26R) of the thermal relay. A combined stop and reset operation is possible by actuating the stop push-button alone, by virtue of the bearing of the stop lever (30) on the reset lever (40). <IMAGE>
