Abstract (en)

[origin: EP0464326A1] The invention relates to an application device for marking wires and cables, comprising a film magazine for a printed film strip and a protective film strip. Furthermore, a printer for printing the printed film strip is provided. The printed film strip and the protective film strip, which is pressed on after the printing, are cut in a film and wire receiver to the marked length and, after the wire to be marked has been enveloped, are welded together to form a closed sleeve. In this way, a subsequent marking of the wire is possible without connected wires having to be detached. The marking is protected against environmental influences by the protective film and can be applied in situ. <IMAGE>
