Abstract (en)

[origin: EP0464368A2] The invention relates to a device for enveloping a stack of objects with a stretchfilm, comprising a satellite mounted in a frame, which carries a roll of film and at least one braked deflection roller and circles round the stack of objects. A slip ring-less device is characterised by a brake (11) whose braking force is derived from the rotary movement of the satellite and/or of the deflection roller (5). A mirror system taken along with the satellite also makes possible a slip ring-less monitoring of film tear-off. <IMAGE>
