Abstract (en)

[origin: EP0464376A2] A time-controlled and/or manually operable switch lever (1) having a device, which can be adjusted by means of a toothed alignment lock, for adjusting the switching point of an electric switch (7) for electromechanical timers, is formed from a lever part (1a) and a lever arm (1b), which can be pivoted radially with respect to the lever part (1a), a spring element acting radially between the lever part (1a) and the lever arm (1b), and the lever part (1a) and the lever arm (1b) engaging with one another via a latching tooth system (4, 6). <IMAGE>
