Abstract (en)
[origin: EP0464409A1] Colour photographic recording material with at least one blue- sensitive silver halide emulsion layer containing at least one yellow coupler, at least one green-sensitive silver halide emulsion layer containing at least one magenta coupler and at least one red-sensitive silver halide emulsion layer containing at least one cyan coupler and with conventional interlayers and protective layers, wherein the silver halide applied to all the light-sensitive layers, expressed as AgNO₃, is not more than 0.3 g/m² and the colour coupler-containing layers contain, dissolved in hydrophobic oil droplets, at least one p-phenylenediamine compound having a primary amino group and at least one ballast radical, can be developed using an intensifier bath, with very little pollution of the environment.
