Abstract (en)

[origin: EP0464451A1] The electrical connector comprises a case 5 enclosing a device 6 for supplying a power-consuming apparatus and has an oblong general shape, a large face 7 of which bears a male plug 8 having at least two pins 9 oriented perpendicularly to the said large face and the longitudinal extension of which is such that, when the connector is connected to a wall socket 1, the case 5 extends beyond the covering 4 of the wall socket. According to the invention, the male plug 8 is mounted so as to pivot on the large face 7 of the case 5 about an axis A parallel to the male pins 9. The invention is especially applicable to domestic electronic systems. <IMAGE>
