Abstract (en)
[origin: EP0464624A1] The invention relates to a jaw body (1) for ski bindings with a base plate (3) which is provided with holes (4a-4d) for accommodating fastening screws (5), a bearing plate (10) likewise provided with holes (11a-11d) being allocated to the base plate (3), and the fastening screws (5) being held in such a way that they are prevented from falling out in the assembled state of these components. In order to simplify the making of the holes in this arrangement, the invention provides for the holes (11"c, 11"d) in the bearing plate (10") to be offset by up to 0.4 mm relative to the associated holes (4"c, 4"d) in the base plate (3) with regard to a vertical transverse plane of the base plate (3). <IMAGE>
