Abstract (en)
[origin: EP0464800A2] The invention relates to a shoe (10, 110) with a shaft (12, 112) and an essentially watertight lining (14, 114) bearing against the inner side of the shaft (12, 112). A fastening edge (12a, 112a) of the shaft (12, 112) is connected to an intermediate sole (18, 118), a watertight connecting strip (16, 116) bearing against the outer side of the fastening edge (12a, 112a) and this watertight connecting strip (16, 116) being connected in a watertight manner to a sole construction (20, 120) having at least one watertight layer. The water guide of the fastening edge (12a, 112a) to the intermediate sole (18, 118) is interrupted. The connecting strip (16, 116) reaches around in a U-shape the fastening edge (12a, 112a) of the shaft (12, 112) and the internally lying lining (14, 114). Furthermore, the inner side (16b, 116b) of the connecting strip (16, 116), which bears against the essentially watertight lining (14, 114), is connected in a watertight manner to the essentially watertight lining (14, 114) and also to the intermediate sole (18, 118). <IMAGE>
