Abstract (en)
This invention relates to a multilayer film which can be printed with various printing systems. The multilayer film comprises a top layer consisting of a mixture of one or more polyesters and one or more polyacrylates, and one or more other layers. Preferably the polyester of the top layer is a copolyester of a diacid consisting of terephthalic acid or 1,4-cyclohexanedicarboxylic acid, and a diol consisting of cyclohexanedimethanol, polyalkylene glycol and/or alkylene glycol. A preferred range of the ratio of polyester to polyacrylate in the top layer is from 99:1 to 80:20. Examples of multilayer films include three- and five-layer films. The multilayer film may be provided with a pressure-sensitive adhesive layer. This invention also relates to the top layer composition as such.
