Abstract (en)

A method for processing a silver halide color photographic light-sensitive material (A) comprising a support having thereon a silver halide emulsion layer containing silver halide grains having a silver iodide content of not less than 0.5 mol%, said method comprising: developing said photographic material with a color developer; bleaching said photographic material with a bleaching solution; and fixing said photographic material with a fixing solution (FA); wherein the fixing solution (FA) is replenished by a fixing solution (FB) that has processed a silver halide photographic material (B) comprising a support having thereon a silver halide emulsion layer containing silver halide grains substantially not containing silver iodide.
