Abstract (en)

In a method of processing photographic color paper of the silver chloride ratio to silver halide being more than 80 %, stabilizing baths using a stabilizing solution which has the surface tension of 15 to 60 dyne/cm and contains the specific surface active agent and/or the specific adsorbent is disclosed. An over-flow from the stabilizing bath for color film can be used as a replenishing solution to the stabilizing bath for the color paper and the solution is refreshed by recycling through the adsorbent bed equipped with the stabilizing bath.
