Abstract (en)

[origin: JPH04231957A] PURPOSE: To improve elasticity of the skin after massage, decrease moisture and fat existing on the surface of the skin remarkably, and make a massage agent penetrate into the skin comparatively quickly after massage. CONSTITUTION: This massage device has at least two rotating members 2, 3, wherein the rotating members are arranged in such a manner that the directions of axes of rotation of the rotating members have an angle of inclination ranging from 60 deg. to 170 deg. between them. The rotating member is formed of flexible material. Each rotating member is provided with raised parts 412, 417, 427, 432. Contact end parts 413, 418, 428, 433 suitable for contact with the skin are provided on the raised parts. These contact end parts are arranged at spaces in the axial direction and in the circumferential direction of the rotating members.
