Abstract (en)

[origin: EP0465389A1] The invention relates to a device for fastening opaque or transparent facade-panels to a facade having a load-bearing or additional metal framework. This device comprises a plane base (1) bearing at one of its ends a fastening element (2a) whose axis (3) is perpendicular to the base (1) and at the other end a bracket (4) carrying a crosspiece (5) whose ends are formed by fastening elements (2b, 2c) which are identical to the element (2a) and whose axes are parallel to the base (1). This device enables buildings to be rapidly rendered water-tight and/or air-tight and facilitates the assembling and the individual disassembling of the facade-covering panels or frames. <IMAGE>
