Abstract (en)  
[origin: WO9011939A1] In a two-part bottle crate (2, 3) with a division running parallel to one outer wall, where the components have adjacent auxiliary walls (7, 8) limiting the joint and running parallel to an outer wall, said auxiliary walls extending only over part of the height of the bottle compartments, its dimension at right angles to the partial joints is reduced by arranging the auxiliary walls above each other, at least in sections. This bottle crate has outside dimensions no greater than those of a corresponding indivisible crate.
