Abstract (en)

[origin: WO9011688A1] This invention provides a vaccine for the immunization of a vertebrate or invertebrate comprising an avirulent derivative of *S. choleraesuis*. The derivatives being substantially incapable of producing functional adenylyl cyclase and/or cyclic AMP receptor protein. The invention also provides a vaccine for the immunization of a vertebrate and invertebrate comprising a virulent derivative of a pathogenic microbe said derivative being substantially incapable of producing functional adenylyl cyclase and/or cyclic AMP receptor protein while being capable of expressing a recombinant gene derived from a pathogen of said vertebrate to produce an antigen capable of inducing an immune response in said vertebrate against said pathogen.
