Abstract (en)

[origin: EP0465997A1] The invention proposes "tailoring" a three-dimensional framework panel such that two-layered supplementary three-dimensional frameworks (1-3) can be inserted into the outwardly open hollow spaces (openings 15, 16) at the upper side and at the side walls of the tailored three-dimensional framework panel, in such a manner that, at the upper side and at the side walls of the three-dimensional framework panel, a grid of bars (6) and joint pieces (7) is present in each case in one plane. <IMAGE>
