Abstract (en)
A window regulator (1)(52) wherein a slide (7), mounted on a guide (5) extending along an axis (6), is connected, by means of a first hinge (9), to a first end of a drive arm (10), the other end of which is connected, by means of a second hinge (11), to a window (2) sliding in a direction (3) perpendicular to the axis (6) of the guide (5). The drive arm (10) is rotated in relation to the slide (7) by an actuating arm (14) having a first point (23) hinged to the guide (5) on the axis (6) of the same, and a second point (17) hinged to the center line of the drive arm (10); the distance between the first and second points (23, 17) of the actuating arm (14) being equal to half the distance between the first and second hinges (9, 11). <IMAGE>
